

# The Process

## Kick Off Call

The client briefs us on what they want and need. Project timelines are being set as well.

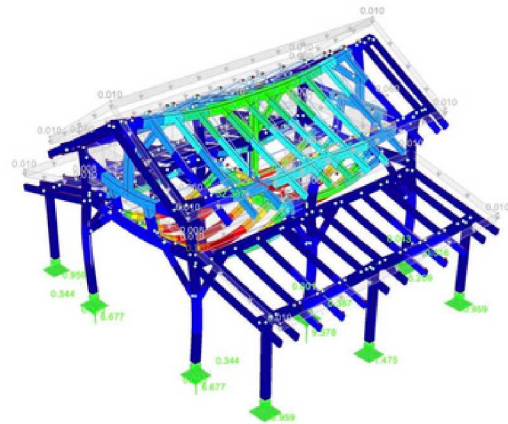

STEP  
01

STEP  
02

## Design

We have some of the most experienced timber frame designers here at Timber Frame HQ. They all have sharp slicks in their tool chests. Good designers understand the material and how it goes together. It is crucial to have an experienced timber framer design your dream.

## Engineering

Only the best for your project. Our engineers are timber frame engineers, many of them doctorates, that love heavy timber construction just as much as you and I.

STEP  
03

STEP  
04

## Production

Joinery cut by CNC machine. All joints, drillings, mortises, and tenons will be cut within tight tolerances. All members are labeled according to the production numbers that we have assigned during the production of your model and plans.

## Delivery

We carefully bundle, wrap, and deliver your timber frame and hardware to you. We will coordinate with you as to approximate delivery time on the agreed date.
